

Lorenzo Gomez Martins

Software Developer

ABOUT ME

Advanced student of the University Technician Degree in Programming (UTN), about to start the final semester. Solid background in web and backend development, with academic experience in full stack projects. I work with HTML, CSS, JavaScript and Python (Junior), and have developed a project using Node.js, Express and MongoDB, applying concepts such as authentication, role-based access control, CRUD operations and data persistence. I am seeking a Junior or Trainee position, or opportunities to collaborate on software projects in order to gain and expand professional experience, contribute with technical commitment, and continue growing in real-world development environments.
